Reliable partner for your SharePoint Application Development, Consultants & Solutions

Gateway Programmer is highly qualified & experienced consulting and offering solutions in SharePoint Development, SharePoint consulting, SharePoint Custom Web Parts, MOSS 2007, SharePoint workflow management, SharePoint content management, SharePoint Custom Solutions, SharePoint v 3.0 services, SharePoint excel services, SharePoint portal server 2007, SharePoint Data Migration, SharePoint application, SharePoint collaboration, Customized SharePoint Solutions, SharePoint Branding Services, SharePoint Enterprise search, SharePoint BDC .

Why Microsoft SharePoint?

SharePoint brings people to work together and easier. With the help of SharePoint 2010, you can set up sites for information sharing with your client, managing files or document easily from start to end, and to take better decisions you can publish the report.

Microsoft Windows SharePoint provides the platform solution for the next version of Microsoft SharePoint Products and Technologies. Latest features and added programmability supported in Microsoft Windows SharePoint Services 3.0 is providing a wealth of development opportunities and ability to build applications with dashboards and menus with the help of configuration in place of coding that will reduce your time and cost for building applications.

Office SharePoint Server 2007 is excellent integrated server for Office applications to store your documents as part of your web application which including Excel, Outlook, InfoPath and Word, which can be easily usable in enterprise solution in SharePoint. Windows SharePoint Services 3.0 adds foundational components for excellent use in creating web based applications like website templates, document libraries, web park framework, workflow engine, data lists etc.

Microsoft Visual Studio 2010 gives you a complete set of project templates, designers, and packaging tools for SharePoint 2010 solutions. Plus, you can install SharePoint 2010 on Microsoft Windows 7, making it easier than ever to develop SharePoint applications.

With SharePoint 2010, our development team can build custom applications and components to rapidly respond to business needs. With familiar tools, it's easy to create Web Parts, external content types, and workflow activities for use in SharePoint solutions. A full set of extensibility APIs also lets you customize your SharePoint implementations. What's more, you can count on community support and training opportunities to help you do your work in SharePoint quickly and effectively.

Why Gateway SharePoint Developer?

- 20+ large implementation and 30+ medium to large size implementation with 30+ SharePoint professionals and experience in 10+ industry domains 100+ man years of experience within SharePoint team.
